Mission Statement
We are a Catholic institution of learning dedicated to advancing the frontiers of knowledge in the theoretical and applied fields through quality graduate education that is comprehensive and responsive to the needs of society. We are committed to the formation of scholars and high-quality professionals who are ethical, competent, compassionate, and committed to the service of their respective professions, the church, the nation, and the global community.

Vision Statement
We envision a Graduate School that stands for excellence and innovation and that is globally recognized for its distinct degree programs and quality research outputs.

Goals and Objectives
The Graduate School commits itself to develop:
1. Competent professionals who, inspired by the ideals of St. Antoninus of Florence, promote excellence in the production, advancement, and dissemination of specialized knowledge and skills in the sciences, the arts, and community service.
2. Scholarly researchers and creative thinkers who, kindled by St. Thomas Aquinas’ ardor for truth, aspire to become fonts of intellectual creativity and, in their quest for quality research, are proficient and critical in assessing and communicating information in various fields that impact the professions, the church, the nation, and the global community;
3. Professional Christian leaders who, touched by St. Dominick de Gazzani’s apostolic fire and warmed by Mary’s motherly care, articulate ethics and truth, high level of moral maturity in resolving issues and promoting social justice and compassion for the poor, and care for the environment;
4. Globally engaged citizens who, with ardent advocacy for life, promote a deeper understanding of tolerance and justice as well as linguistic, religious, and cultural diversities as a result of precise evaluation of modern problems and issues;
5. Committed scholars who, nurtured by the dogmas of Christian faith and values, are dedicated to the pursuit of truth through the promotion of an intellectual culture that values academic rigor and freedom of scientific investigations; and
6. Lifelong learners who, empowered by St. Antoninus of Florence’s zeal for learning, are committed to the advancement of a higher culture through a continuous search for intellectual inquiries and new knowledge as well as faithfulness to Catholic intellectual traditions.

Program Intended Learning Outcomes (PILO)
Upon successful completion of the MS major in Biology Education Program, the graduate will be able to:

1. Solve critically and creatively problems set in biology, and apply biological techniques in research and the academic.
2. Analyze and generate new ideas in biology through research and analysis of given data / information.
3. Work efficiently and effectively in individual- and group-oriented activities in the field, classroom or laboratory setting.
4. Convey biological concepts in a clear and concise manner to a broad range of audiences in both written and oral form.
5. Apply biological concepts to address issues in environmental protection, conservation, utilization of natural resources for sustainable and ethical use.
6. Foster the use of knowledge and research to an inquiry-based practice in the field of biology.

Curriculum
Master of Science major in Biology Education

Pre-Requisite Courses: 6 Units

GS 500 - St. Thomas and Critical Thinking
As the philosophical foundation of Research Methodology, it is a study of the principles of skills and critical thinking according to St. Thomas Aquinas in the three areas of mental cognition: simple apprehension, judgment, and reasoning; and of common fallacies towards the acquisition of the art of argumentation.

GS 501 - Research Methodology
The student is introduced to research concepts relevant to Biology Education. Discussions center on how to prepare a thesis emphasizing choice of title, statement of the problem, sources of data, analysis and evaluation of information gathered among others. Course outcome is a thesis proposal. Reviews the UST-GS Thesis Writing Guide Booklet.

Core Courses: 9 Units

EDM 702 - Psychology of Human Growth and Development
The growth stages in human life, the dimensions of growth and the learning tasks to be developed at each stage.

EDM 705 - Philosophy of Education
This course deals with the study of major philosophies of education that have significantly influenced educational practices. It studies questions that concern philosophers of education and tries to define clearly the philosophical terms that assist in understanding educational theories. The students are expected to develop the ability to practice philosophical thinking about educational issues. There will be a two-way approach, on one hand, to trace the philosophical base of some educational practices and on the other hand, to discover the consequences of a philosophical thought in the practice of education. To study the branches of philosophy that provide education its foundations. At the outset, an analysis of the reality of education will be made based on St. Thomas Aquinas’ philosophical thinking.

EDM 708 - Trends and Practices in Curriculum Development
A study of concepts, foundations, theories, principles, competing models, paradigms, and processes underpinning the technical and practical aspects of curriculum planning. Engages students in curriculum planning procedures that allow them to build theories, create visions, and manage strategies for attaining them in the light of both fundamental and contemporary curriculum thoughts and action and institutional changes. Significant researches and fundamental issues, problems, concerns and future directions in the field of curriculum planning and changes are analyzed and synthesized.

EDM 710 - Instructional Materials Preparation & Instrumentation
A theory and practice-based course that deals specifically with both macro and micro level instructional designs in both educational and training settings. Focus is on the development of competencies in the four components: analysis, design, development and evaluation.

EDM 711 - Educational Diagnosis
The assessment of instructional results to identify learner strengths and disabilities: analysis of assessment results and corrective measures.

EDM 715 - Instructional Design
The politics of education in relation of the community; analysis of the input-throughput-output relationships between educational institutions and their service communities.

EDM 720 - Issues & Trends in Science Education
Updates and current concerns in science education.

MAJOR COURSES - 15 UNITS

NRS 650 - Biostatistics
Introduction to the principles of experiment designs and the various statistical tools for interpreting data from biological, medical, and other scientific experiments.

BIO 600 - Advanced Systematics
A practical knowledge of revisionary taxonomy and the phylogenetic principles. It explores the principles and methods of zoological and botanical/fungal nomenclature, biotic inventory, and description of new taxa, phylogenetic analysis, and classification. Special exercises will delve into protocols for basic taxonomic studies (including species description), and methods of phylogenetic analysis with a particular emphasis on morpho-anatomical characters.

BIO 601 - Advanced Cell and Molecular Biology
Study of cell structure and molecular organization in the cell; functions and processes, and the regulation and control of the biomolecular components of a cell.

BIO 602 - Advanced Ecology
This course facilitates the recognition of the foundations and basic concepts of ecology and the application of these to current topics on ecology such as landscape ecology and ecosystem management. The basic and advanced concepts of the ecological principles which govern the interactions between plants and animals will be presented.

BIO 603 - Advanced Developmental Biology
The study of the structural and physiological changes occurring in a developing vertebrate organism from fertilization, embryogenesis, gametogenesis, metamorphosis, regeneration and growth. Molecular processes involved in differentiation, determination and specialization of embryonic cells are also discussed.

BIO 604 - Advanced Genetics
Study of the principles of the molecular and physical bases of biodiversity; the mechanism resulting from these diversities and the principle that govern their heredity from one generation to another.
Cognate Subjects: 3 units
Any related course on Biology/Microbiology.

Other Requirements:
Written Comprehensive Examinations (WCE)
TW I - 3 units (Thesis Proposal)
TW II - 3 units (Research Colloquium)
TW III - 3 units (Thesis Defense)

Total = 42 Units
